The indicator above illustrates the position of this Fund on a standard risk/reward category scale.

This indicator is based on historical data and may not be a reliable indication of the future risk profile of the Fund.

The risk and reward category shown is not guaranteed to remain unchanged and may shift over time.

The lowest category does not mean investment is "risk free".

This indicator is not a measure of the risk that you may lose the amount you have invested.

Due to the Fund's lack of operating history, this risk rating is based on the 5 year historical volatility of actual returns of the Fund since its launch in July 2014 and, prior to July 2014, the returns of a simulated portfolio created using actual trades of a portfolio that has been managed by the investment professionals of the investment manager utilising a similar strategy to the Fund, as modified to exclude commodities and to replace certain actual trades in government bond futures with simulated trades in interest rates futures to conform the simulated portfolio to the Fund's investment policy. The historical volatility of this portfolio gives it a risk level 4. As this risk rating is not derived from the Fund, it may not reflect the Fund's actual risk level in the future.

The indicator opposite does not take account of the following risks of investing in the Fund:

*Counterparty Risk: where the Fund has material investment exposure through contracts with a third party.

For more information on risks, please see the section entitled 'Risk Factors' in the prospectus of the Company.
